

KRISHNA SHARMA

AI/ML Engineer | Software Developer

Gurugram, India | [+91-7817054258](tel:+917817054258) | ks76479@gmail.com | [LinkedIn](#) | [GitHub](#) | [Kaggle](#) | [Portfolio](#)

SUMMARY

AI/ML-focused Computer Science undergraduate (B.Tech, 2027) who builds both production web interfaces and machine learning models. Built the React.js product behind WritED as a Software Development Intern, cutting render time by 30%. Trained a CNN digit classifier (98.5%+ test accuracy on MNIST) and a TF-IDF sentiment classifier (85% accuracy) using TensorFlow/Keras and scikit-learn. Skilled in model evaluation, cross-validation, hyperparameter tuning, and REST API integration.

EDUCATION

J.S. University, Shikohabad | B.Tech in Computer Science Expected 2027
CGPA: 7.42/10 | AISSCE (Class 12): 80.2% (2021) | AISSE (Class 10): 93% (2019)

EXPERIENCE

WritED Edutech Private Limited | Software Development Intern | Remote Feb 2026 – Present

- Built [WritED](#), an exam-preparation platform, from scratch with React.js and JavaScript, including AI-assisted content features and performance analytics.
- Designed reusable, responsive React components for desktop and mobile, reducing render time by 30%.
- Integrated REST APIs and client-side content handling; collaborated in an Agile team via Git/GitHub.
- Audited writed.in, a JavaScript-rendered single-page app, with Screaming Frog to find canonicalization, meta-tag, and crawlability gaps; implemented canonical tags and client-side redirects to fix them.

PROJECTS

Handwritten Digit Classifier | Python, TensorFlow/Keras, CNN | [Kaggle](#) | [GitHub](#)

- Built a CNN classifier on MNIST (70,000 images) with preprocessing, normalization, and data augmentation.
- Reached 98.5%+ test accuracy using dropout and early stopping; diagnosed overfitting with learning curves and a confusion matrix, then tuned the architecture for faster inference.

Sentiment Analysis System | Python, scikit-learn, NLTK, TF-IDF | [Kaggle](#) | [GitHub](#)

- Built a 3-class sentiment pipeline on 5,000+ samples using tokenization, stop-word removal, and TF-IDF.
- Benchmarked Logistic Regression, Naive Bayes, and Random Forest with cross-validation and grid search, reaching 85% accuracy.
- Evaluated models with precision, recall, F1-score, and ROC-AUC; explored word frequencies and n-grams.

URL Shortener API | Python, FastAPI, PostgreSQL, Docker

- Built a REST API with FastAPI and PostgreSQL that creates short links and redirects them to the original URLs.
- Containerized the service with Docker for a reproducible setup.

TECHNICAL SKILLS

Programming: Python, C++, C, SQL, JavaScript

Machine Learning: supervised and unsupervised learning, regression, classification, clustering, feature engineering, cross-validation, hyperparameter tuning, scikit-learn

Deep Learning: CNNs, ANNs, TensorFlow, Keras, PyTorch, model training and evaluation, dropout, early stopping

NLP: NLTK, TF-IDF, tokenization, sentiment analysis, text preprocessing

Web and Backend: React.js, FastAPI, REST APIs, HTML5, CSS3, Tailwind CSS

Databases and DevOps: MySQL, PostgreSQL, Docker, Git/GitHub, Linux

Libraries and Tools: NumPy, Pandas, Matplotlib, Jupyter, Kaggle

Problem Solving: data structures and algorithms, dynamic programming, Codeforces, LeetCode
